Design and Implementation

Overall Design

The point-of-sale system provides an interface for both its staff and customer.

It contains functions including product, transaction and bookmark management and sales analysis. Register and login systems are also included.

Homepage

```
Welcome to ABC supermarket!

*****

1 - Staff login
2 - Customer login
3 - New user register
4 - Close application

Your choice :
```

At first, users will be led to the homepage to input their choices for further actions.

When inputting their choice, a validation check is applied to ensure all inputs lies within 1-4.

```
Welcome to ABC supermarket!

*****

1 - Staff login
2 - Customer login
3 - New user register
4 - Close application

Your choice : 5
Invalid choice! Please enter again
your choice :
```

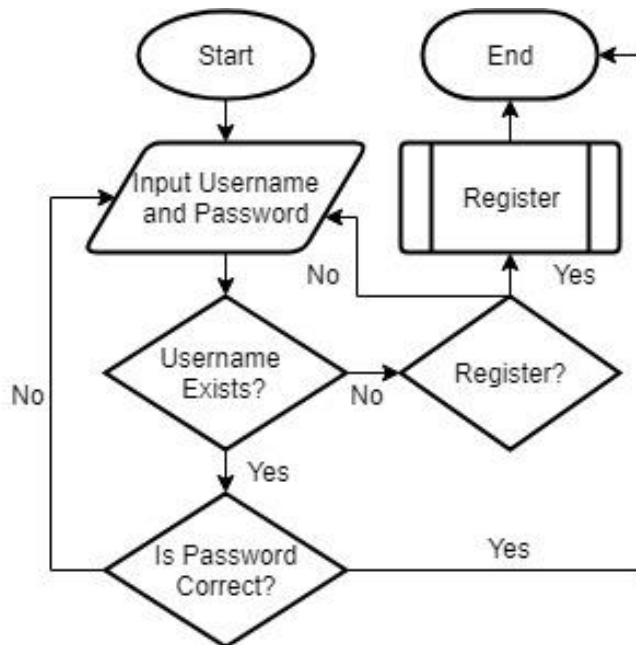

If choice 1 is inputted, users will be led to the login page for staff.

If choice 2 is inputted, users will be led to the login page for customer.

If choice 3 is inputted, users will be led to the register page to register a new customer account.

If choice 4 is inputted, the application will be closed after displaying a 'thank you' message.

Login

In the login page, user will be required to input their username and password.

Staff login

```
Please input your username : admin
Please input your password : adminpw
```

Customer login

```
Please input your username : customerA
Please input your password : cusa
```

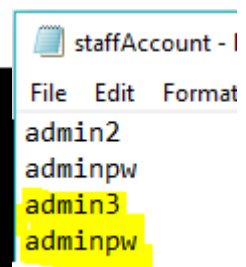

After inputting, the system will retrieve the database of either staff or customer account, depending on which type of login the user chose, to check if the pair of username and password exists.

If users entered a username that does not exist, user can choose to register a new customer account or re-enter the username.

```
Please input your username : cus
Please input your password : cus
Invalid username!
Register? (Y/N)
```

Afterwards, a verification check is carried out. If the user entered a password that does not match with the inputted username, the verification check is failed. The will be required to re-enter both the username and password to verify his/her identity.

```
Please input your username : admin3
Please input your password : adm
Wrong password! Please input again
Please input your username :
```

A screenshot of a web application menu titled "staffAccount - I". It features a menu bar with "File", "Edit", and "Format". Below the menu bar, there is a list of items: "admin2", "adminpw", "admin3", and "adminpw". The items "admin3" and the second "adminpw" are highlighted with a yellow background.

staffAccount - I

File Edit Format

admin2

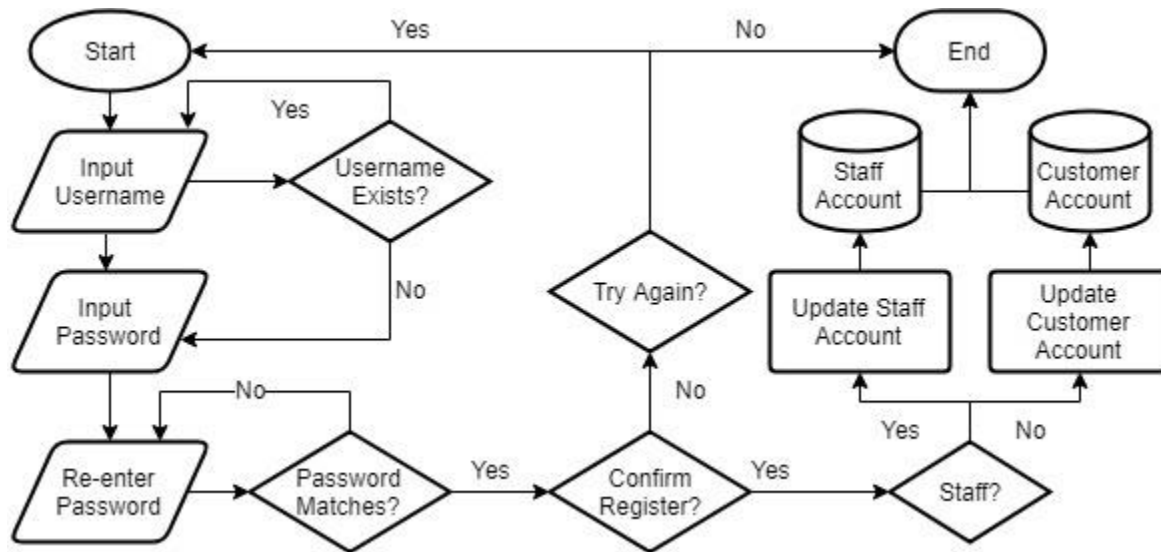

adminpw

admin3

adminpw

If the user entered a pair of correct username and password, he or she will be led to either the customer homepage or staff homepage.

Register

User will first be requested to input a username.

If the username is shorter than 6 characters, the user will be asked to enter another username.

```
Please input the following details
Username : cus
Username must be at least 6 characters! Please enter again
Username :
```

If the username already exists, he or she will be asked to enter another username.

```
Please input the following details
Username : customerA
Username already exists, please input another username
Username :
```

customerAccount -

File Edit Format Vi

customerA

cusa

customerB

cusb

customerC

cusc

Then the user will be requested to enter a password.

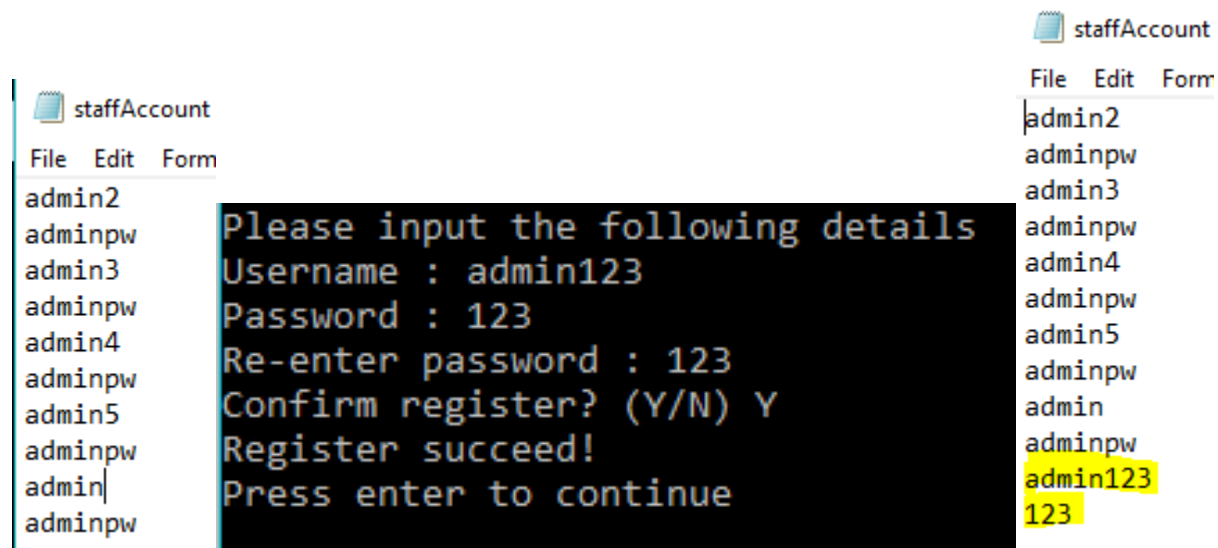

After entering the password, user will be requested to re-enter the password for verification purpose.

```
Please input the following details
Username : customerF
Password : cusF
Re-enter password :
```

A verification check is carried out, if the re-entered password is not same as the original one, the user is required to enter again.

```
Please input the following details
Username : customerF
Password : cusF
Re-enter password : cus
Password does not match, please enter again
Re-enter password :
```

After verifying the username and password, if the user confirms the register, the database storing staff/customer account would be updated.

The screenshot shows a window titled 'staffAccount' with a menu bar (File, Edit, Form). The main area displays a registration process. A central black box contains the following text:

```
Please input the following details
Username : admin123
Password : 123
Re-enter password : 123
Confirm register? (Y/N) Y
Register succeed!
Press enter to continue
```

On the left side of the window, a list of accounts is shown:

- admin2
- adminpw
- admin3
- adminpw
- admin4
- adminpw
- admin5
- adminpw
- admin|
- adminpw

On the right side of the window, another list of accounts is shown:

- admin2
- adminpw
- admin3
- adminpw
- admin4
- adminpw
- admin5
- adminpw
- admin
- adminpw
- admin123
- 123

The user will then be led back to the application homepage, he or she will be able to login to the new account.

Staff Homepage

```
Welcome admin!

*****

1 - Transaction
2 - Manage user
3 - Manage stock
4 - Sale analysis
5 - Logout
6 - Change password

Your choice?
```

The staff interface provides functions related to operation management for staff.

Upon inputting the choices, a validation check is carried out to ensure the input lies within 1-6.

```
1 - Transaction
2 - Manage user
3 - Manage stock
4 - Sale analysis
5 - Logout
6 - Change password

Your choice? a
Invalid choice! Please enter again
```

If choice 1 is inputted, the user is led to transaction management page.

If choice 2 is inputted, the user is led to user management page.

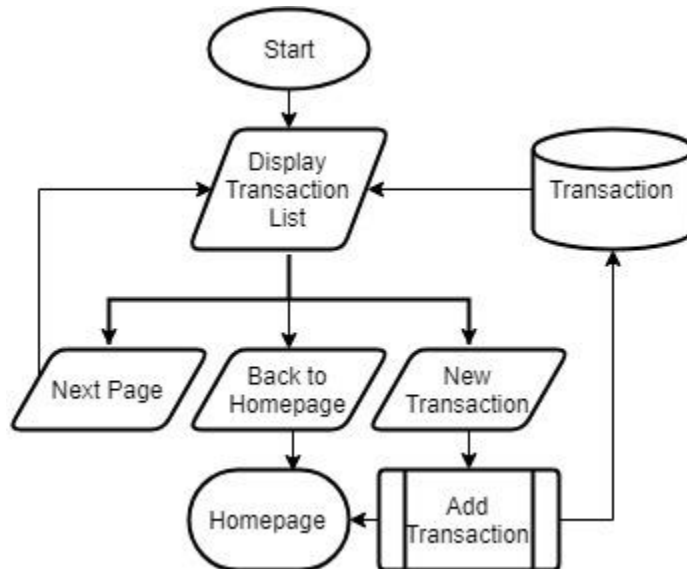

If choice 3 is inputted, the user is led to stock management page.

If choice 4 is inputted, the user is led to sales analysis page.

If choice 5 is inputted, the user is logged out and led to application homepage.

If choice 6 is inputted, the user is led to password-changing page for his/her own account.

Transaction

After entering the transaction homepage, a list of transaction record sorted in descending order of date is displayed. Details including transaction ID, date, product information and quantity are shown.

```

1 - New transaction
2 - Back to homepage
Your choice :
```

New Transaction

To add new transaction, user will need to input product ID and quantity.

If user entered an invalid product ID, he or she will be required to enter again.

```
New Transaction
Product ID : 0000001
Invalid product ID! Please enter again
Product ID :
```

If the product is out of stock, the transaction will be stopped, and the user will be led back to transaction homepage.

```
New Transaction
Product ID : 00005
Product out of stock!
Press enter to continue
```

If the quantity entered cannot pass the validation check, the user will be required to re-enter the quantity.

```
New Transaction
Product ID : 00001
Quantity : 10000
Current stock : 24
Please enter again
Quantity : 0.5
Invalid input! Please enter again
Quantity : -5
```

After confirming, the system will automatically generate other details including transaction ID, date and price of the transaction.

```
New Transaction
Product ID : 00001
Quantity : 15
Confirm? (Y/N)Y

Transaction successful!
Transaction ID : 00000005
Date : 02/11/2018 22:08
Product ID : 00001
Product Name : Product name
Quantity : 15
Price : 225.00
Press enter to continue
```

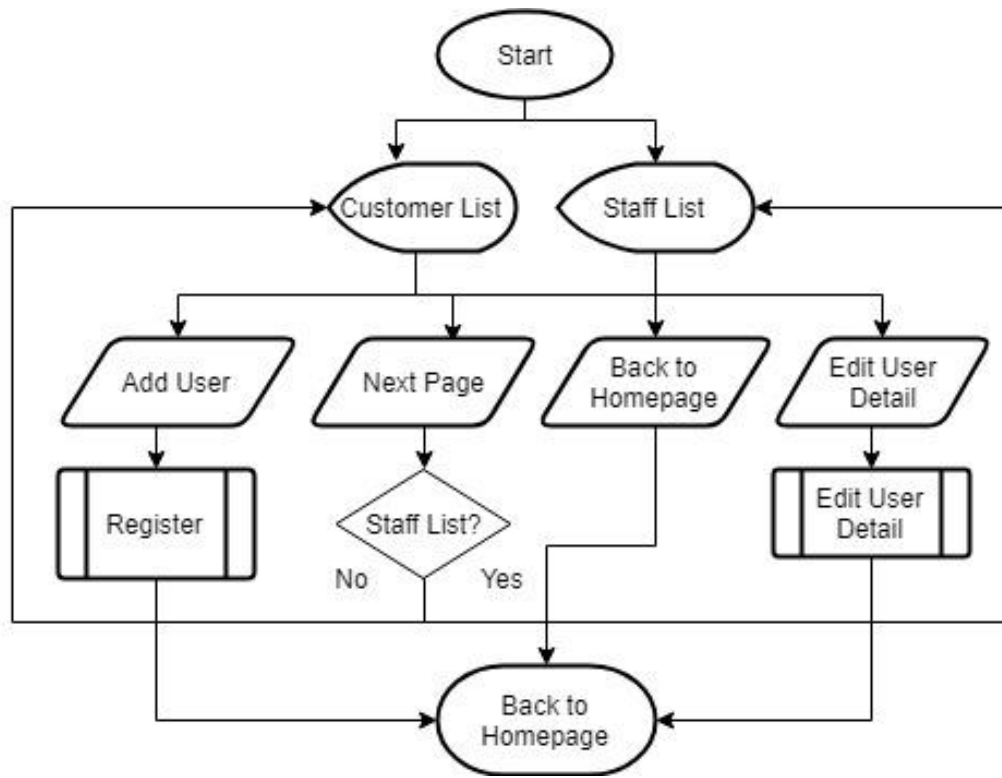

After adding the new transaction, the user will be led back to transaction homepage, the transaction added just now will also be displayed at the top of the list.

```

Procedure List

Name	Use
init	Read count of users, transactions and products from 'count.txt' into global variables. Initialize string formatting variables.
resetCount	Update count of users, transactions and products to 'count.txt' from global variables.
loginPage	Main homepage displayed, direct user to "staff login", "customer login", "new user register" and "close application".
login	Verify the login account. If the user is verified, it directs user to staff or customer homepage; else it directs user to register.
userRegister	Register a new user account.
staffHomepage (staff only)	Staff homepage, direct user to "transactionHome", "manageUser", "searchProduct", "saleAnalysis", "changePassword" or logout.
changePassword	Change password of current user account.
transactionHome (staff only)	Display transaction information and directs user to "newTransaction" or back to homepage.
newTransaction (staff only)	Add new transaction and update related databases ('transaction.txt', 'product.txt', 'sales.txt').
manageUser (staff only)	Display information of staff or customer user. Direct user to "userRegister", "staffUserDetail" or back to homepage.
staffUserDetail (staff only)	Display details of user and allow current user to change password or delete the account.
searchProduct	Carry product filtering, passes results to "displayStock".
displayStock	Display products information based on filtering from "searchProduct". Direct user to "newProduct", "editStockDetail", "addBookmark" or logout.
newProduct (staff only)	Add new product.
editStockDetail (staff only)	Change the details of an existing product.
saleAnalysis (staff only)	Display sales information of products and allow sorting by revenue or quantity.
addBookmark (customer only)	Add the product to bookmark list of the user.
customerHomepage (customer only)	Customer homepage, direct user to "searchProduct", "customerBookmark", "changePassword" or logout.
customerBookmark (customer only)	Display bookmark list of current user. Direct user to "deleteBookmark" or back to homepage.
deleteBookmark (customer only)	Delete the product from bookmark list of the customer.

Database List

Name	Use
bookmark.txt	Store bookmark list of customer user.
count.txt	Store count of staff user, customer user, transaction, product.
customerAccount.txt	Store customer username and password.
product.txt	Store product ID, name, type, price, stock and discount.
sales.txt	Store product ID, quantity and revenue.
staffAccount.txt	Store staff username and password.
transaction.txt	Store transaction ID, date and time, product ID, product name, quantity and revenue.

Variable List

Global Variable

Count

Name	Type	Use
staffNumber	Longint	Store number of staff user
customerNumber		Store number of customer user
transactionNumber		Store number of transactions
productNumber		Store number of products

Formatting

Name	Type	Use
fmtID	String	Format transaction ID
fmtDate		Format date
fmtName		Format name
fmtProductID		Format product ID
fmtQuantity		Format quantity
fmtPrice		Format price

Local Variable

init

Name	Type	Use
inp	Text	Input from 'count.txt'

resetCount

Name	Type	Use
op	Text	Output to 'count.txt'

Login

Name	Type	Use
tmpUsername	String	Store username read from database
tmpPassword		Store password read from database
pw	Boolean	Check if login username is found in database
us		Check if login password is correct
x	Longint	Parameter to specify whether the operation is for customer or staff user
inp	Text	Input from 'staffAccount.txt' or 'customerAccount.txt'

userReigster

Name	Type	Use
tmpUsername	String	Store username read from database
tmpPassword		Store password read from database
username		Registration username
password		Registration password
pw	Boolean	Check if login username is found in database
us		Check if login password is correct
x	Longint	Parameter to specify whether the operation is for customer or staff user
inp	Text	Input from 'staffAccount.txt' or 'customerAccount.txt'
op		Output to 'staffAccount.txt' or 'customerAccount.txt'

changePassword

Name	Type	Use
tmpUsername	String	Store username read from database
tmpPassword		Store password read from database
tusername		Username of user to be changed.
tpassword		Password of user to be changed.
fileName		The name of database to be edited.
x	Longint	Parameter to specify whether the operation is for customer or staff user
inp	Text	Input from 'staffAccount.txt' or 'customerAccount.txt'
op		Output to 'staffAccount.txt' or 'customerAccount.txt'

transactionHome

Name	Type	Use
transactionID	String	Transaction ID
date		Transaction date
productID		Transaction product ID
productName		Transaction product name
quantity		Transaction product quantity
price		Transaction total price
page	Longint	Current display page number
lc		Total number of pages of transaction
inp1	Text	Input from 'transaction.txt'

newTransaction

Name	Type	Use
transactionID	String	Transaction ID
date		Transaction date
tmp		Temporary variable
productID, productName, productType		Product information
price	Real	Transaction total price
tprice		Temporary transaction total price
quantity	Longint	Product quantity
stock		Product stock
discount, a, b, err		Product discount information
inp1, inp2	Text	Input from 'transaction.txt', 'sales.txt' or 'product.txt'
op1, op2		Output to 'producttmp.txt', 'transactiontmp.txt' or 'tmp.txt'

manageUser

Name	Type	Use
tmpPassword	String	Store username read from database
tmpUsername		Store password read from database
choice1, choice2		Store user action choice
lc, page, n	Longint	User display information
inp	Text	Input from 'staffAccount.txt' or 'customerAccount.txt'

staffUserDetail

Name	Type	Use
tmpUsername	String	Store username read from database
tmpPassword		Store password read from database
fileName		The name of database to be edited
nextUser		Username of account after current account
tusername		Username of account to be edited
inp	Text	Input from 'bookmark.txt', 'staffAccount.txt' or 'customerAccount.txt'
op		Output to 'tmp.txt'

searchProduct

Name	Type	Use
tdiscount	String	Store discount type of product to be searched
tname		Store name of product to be searched
ttype		Store type of product to be searched

displayStock

Name	Type	Use
tname, ttype, tdiscount, tstock	String	Product search information
tmpDiscount, discountType		Product discount information
price		Product price
productID, productName, productType		Product display information
stock		Product stock
discount, a, b, err		Product discount information
inp	Text	Input from 'product.txt' or 'tmp.txt'
op		Output to 'tmp.txt'

newProduct

Name	Type	Use
discount	String	Product discount
tmp, tprice, tquantity		Temporary variable
productID, productName, productType		Product information
price	Real	Transaction total price
quantity	Longint	Product quantity
a, b, err		Product discount information
inp1, inp2	Text	Input from 'transaction.txt', 'sales.txt' or 'product.txt'
op1, op2		Output to 'producttmp.txt', 'transactiontmp.txt' or 'tmp.txt'

editStockDetail

Name	Type	Use
tmp, tdiscout	String	Temporary variable
productID		Product information
price	Real	Transaction total price
quantity	Longint	Product stock
discount, a, b, err		Product discount information
inp	Text	Input from 'product.txt'
op		Output to 'tmp.txt'
v	Boolean	Indicate if the product ID is found

addBookmark

Name	Type	Use
productID	String	Store product ID
tmp		Temporary variable
inp	Text	Input from 'product.txt'
op		Output to 'tmp.txt'

saleAnalysis

Name	Type	Use
tmp1, tmp2	String	Temporary variable
treall	Real	
tmp	Longint	Sales display variable
page, lc		
inp	Text	Input from 'sales.txt'
quantity, id, price	Array	Store product information

customerBookmark

Name	Type	Use
discountType	String	Product discount
tmp, tProductID		Temporary variable
t	Array	
price	Real	Transaction total price
lc, page, count	Longint	Product display information
discount, a, b, err		Product discount information
inp, inp1	Text	Input from 'bookmark.txt'
op		Output to 'tmp.txt'

deleteBookmark

Name	Type	Use
productID	String	Store product ID
tmp		Temporary variable
inp	Text	Input from 'tmp.txt' or 'bookmark.txt'
op		Output to 't.txt'

Plan of Testing

Unit Test

Unit test is carried out on all modules of the program to ensure each individual modules perform its functions well. The list of modules tested are as follow:

Register

1. Username Input
2. Password Input
3. Register Confirmation
4. Retry Register
5. Impact on Database

Staff Interface

1. Staff Login
2. Homepage Choice Input
3. Transaction
4. Manage user
5. Sales Analysis
6. Display Product
7. Change Password

Customer Interface

1. Manage Bookmark
2. Change Password

System Test

Two system tests, one for staff and one for customer interface, were carried out to ensure that the program can runs smoothly when multiple functions and modules are being used consecutively.

User Acceptance Test

User acceptance is done by real users to ensure that the program meets the expectations and needs of users. I have invited four people to carry out user acceptance tests for my program by asking them to carry out operations normally done by users.

Unit Test

Register

Username Input

1. Validation check (User must not enter an existing username)

a. Input an existing username

Expected output: Username already exists, please input another username

Actual output:

```
staffAccount -
File Edit Format
Please input the following details
Username : admin3
Username already exists, please input another username
Username :
admin2
adminpw
admin3
adminpw
```

Result: **Pass**

```
Please input the following details
Username : admin5
Username already exists, please input another username
Username :
admin5
adminpw
admin
adminpw
```

Result: **Pass**

```
customerAccount -
File Edit Format Vi
Please input the following details
Username : customerA
Username already exists, please input another username
Username :
customerA
cusa
customerB
cusb
customerC
cusc
```

Result: **Pass**

```
Username : customerF
Username already exists, please input another username
Username :
customerF
cusF
customerG
cusG
```

Result: **Pass**

b. Input a non-existing username

Expected output: Proceed to next step (ask user to input password)

Actual output:

```
Please input the following details
Username : admin123
Password :
```

Result: **Pass**

```
Username : admin1
Password :
```

Result: **Pass**

```
Please input the following details
Username : customer123
Password :
```

Result: **Pass**

```
Username : customerH
Password :
```

Result: **Pass**

2. Validation check (Username must be at least 6 characters) **Customer only*

a. Input username less than 6 characters

Expected output: Username already exists, please input another username

Actual output:

```
Please input the following details
Username : custo
Username must be at least 6 characters! Please enter again
Username :
```

Result: **Pass**

```
Please input the following details
Username : ctm
Username must be at least 6 characters! Please enter again
Username :
```

Result: **Pass**

b. Input username with length of 6 characters

Expected output: Proceed to next step (ask user to input password)

Actual output:

```
Please input the following details
Username : custom
Password :
```

Result: **Pass**

```
Please input the following details
Username : ctm123
Password :
```

Result: **Pass**

c. Input username longer than 6 characters

Expected output: Proceed to next step (ask user to input password)

Actual output:

```
Please input the following details
Username : customer123
Password :
```

Result: **Pass**

```
Username : customerH
Password :
```

Result: **Pass**

Password Input

1. Verification check (Re-input same password)

a. Input a different password

Expected output: Password does not match, please enter again

Actual output:

```
Please input the following details
Username : admin123
Password : 123
Re-enter password : 13
Password does not match, please enter again
Re-enter password :
```

Result: **Pass**

```
Please input the following details
Username : admin123
Password : adm
Re-enter password : adm123
Password does not match, please enter again
Re-enter password :
```

Result: **Pass**

```
Username : customerH
Password : cush
Re-enter password : cus
Password does not match, please enter again
Re-enter password :
```

Result: **Pass**

```
Username : customerH
Password : cush
Re-enter password : 123
Password does not match, please enter again
Re-enter password :
```

Result: **Pass**

b. Input same password

Expected output: Proceed to next step (ask user to confirm register)

Actual output:

```
Please input the following details
Username : admin123
Password : adm123
Re-enter password : adm123
Confirm register? (Y/N)
```

Result: **Pass**

```
Please input the following details
Username : admin123
Password : 123
Re-enter password : 123
Confirm register? (Y/N)
```

Result: **Pass**

```
Please input the following details
Username : customer123
Password : ctm123
Re-enter password : ctm123
Confirm register? (Y/N)
```

Result: **Pass**

```
Please input the following details
Username : customerH
Password : cush
Re-enter password : cush
Confirm register? (Y/N)
```

Result: **Pass**

Register Confirmation

1. Validation check (input must be 'Y' or 'N')

a. Case mismatch

Expected output: Invalid input! Please enter again

Actual output:

```
Confirm register? (Y/N) y
Invalid input! Please enter again
Confirm register? (Y/N)
```

Result: **Pass**

```
Confirm register? (Y/N) n
Invalid input! Please enter again

```

Result: **Pass**

```
Confirm register? (Y/N) NN
Invalid input! Please enter again
Confirm register? (Y/N)
```

Result: **Pass**

c. Character mismatch

Expected output: Invalid input! Please enter again

Actual output:

```
Confirm register? (Y/N) 1
Invalid input! Please enter again
Confirm register? (Y/N)
```

Result: **Pass**

```
Confirm register? (Y/N) %
Invalid input! Please enter again
Confirm register? (Y/N)
```

Result: **Pass**

```
Confirm register? (Y/N) a
Invalid input! Please enter again
Confirm register? (Y/N)
```

Result: **Pass**

d. Input 'Y'

Expected output: Proceed to next step (Register succeed)

Actual output:

```
Confirm register? (Y/N) Y
Register succeed!
Press enter to continue
```

Result: **Pass**

e. Input 'N'

Expected output: Proceed to next step (Register failed)

Actual output:

```
Confirm register? (Y/N) N
Register failed, try again? (Y/N)
```

Result: **Pass**

Retry Register

1. Validation check (input must be 'Y' or 'N')

a. Case mismatch

Expected output: Invalid input! Please enter again

Actual output:

```
Register failed, try again? (Y/N) y
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

```
Register failed, try again? (Y/N) n
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

b. Length mismatch

Expected output: Invalid input! Please enter again

Actual output:

```
Register failed, try again? (Y/N) 123
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

```
Register failed, try again? (Y/N) %1/klk
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

```
Register failed, try again? (Y/N) YY
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

```
Register failed, try again? (Y/N) NNN
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

c. Character mismatch

Expected output: Invalid input! Please enter again

Actual output:

```
Register failed, try again? (Y/N) 3
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

```
Register failed, try again? (Y/N) %
Invalid input! Please enter again
Register failed, try again? (Y/N)
```

Result: **Pass**

d. Input 'Y'

Expected output: Proceed to next step (Re-enter register page)

Actual output:

```
Confirm register? (Y/N) N
Register failed, try again? (Y/N) Y
```

```
Please input the following details
Username :
```

Result: **Pass**

e. Input 'N'

Expected output: Proceed to next step (Back to homepage)

Actual output:

```
Confirm register? (Y/N) N
Register failed, try again? (Y/N) N
```

```

```

```
Change password
```

```
Old password :
```

a. Verification check 1 (Input original password)

1. Wrong Password

Expected output: Wrong password! Please enter again

Actual output:

```
Old password : pw
Wrong password! Please enter again
:
Old password :
```

Result: **Pass**

```
Old password :
Wrong password! Please enter again
:
Old password :
```

Result: **Pass**

2. Correct Password

Expected output: Proceed to next step (ask user to input new password)

Actual output:

```
Old password : pw21
New password :
```

Result: **Pass**

b. Verification check 2 (Re-enter new password)

1. Wrong Password

Expected output: Password does not match, please enter again

Actual output:

```
New password : password
Re-enter password : pw
Password does not match, please enter again
```

Result: **Pass**

2. Correct Password

Expected output: Proceed to next step (password successfully changed)

Actual output:

```
New password : pw21
Re-enter password : pw21

Password changed successfully!
Press enter to continue
```

Result: **Pass**

User Acceptance Test

User acceptance test is a test carried out by real users to determine whether the system is user-friendly and meets the expectations and needs of user. Therefore, I have invited four friends to carry out the user acceptance test for my program. After trying to use the program for a several times, they gave some feedbacks and opinions about the system.

Firstly, all of them commented that the system is comprehensive with sufficient functions for the daily operations of a real-life point of sale system. Some also expressed their appreciation towards the different functions provided for the staff and user interface.

Secondly, most thought that the overall operation of the program was smooth. Moreover, it can effectively check invalid inputs and prevent the program from crashing due to weird inputs caused by reasons like typing errors.

Thirdly, it is suggested that a graphical user interface can be used instead of command line interface. Since the majority of applications today support graphical user interface, a command line interface drastically reduces the user-friendliness of the program for users unfamiliar with command prompt.

Lastly, a few mentioned that some instructions for certain functions are unclear, such as the filtering function in product display. They hoped that more instructions can be added to state what the function is about and how it can be used.

Evaluation and Improvements

After carrying out the three tests, I found out that my program is overall satisfactory with comprehensive functions and generally smooth usage which satisfies the needs of daily operation of a point of sale system. However, after careful considerations and evaluations, I have concluded some areas that I can make further improvements on.

Data handling

The system performs poorly with large amount of data. As only txt files are used as database with data stored in chronological order, the speed in searching and accessing specific data is slow since efficient data searching algorithms like binary search can hardly be applied. Therefore, the following improvements can be made based on this issue:

1. Sort the data in database

By sorting the data with certain keys, such as lexicographical order, more efficient algorithms like binary search can be applied when searching for specific data to raise searching efficiency and reduce search time.

2. Use a database management system

Due to limitations in aspects such as code complexity and database functionality, the amount and comprehensiveness of functions based on data processing, such as sorting, searching and filtering of data, are restrained. As database management systems provide many data processing functions with high efficiency and effectiveness along with flexible data extraction, the functionality of my program in terms of data handling can be significantly enhanced.

3. Apply more efficient algorithms

In my program, sequential search is applied even when only one specific data is to be searched from the database. When the amount of data is large with many searching operations need to be carried out, the system performs poorly with a slow runtime. Therefore, faster searching algorithms like binary search or even ternary search should be considered.

In addition, when sorting display data, bubble sort is used. As bubble sort is slow with time complexity $O(N^2)$, the runtime significantly worsens with an increasing amount of data. To tackle this problem, more efficient sorting algorithms such as merge sort and quick sort can be used.

Enhance functionality

Apart from the existing functions, it is suggested by some users that the system can add some extra functions or improve its interface to make it an even more appealing and useful one. Therefore, the following are a few ideas that I come up with which can be added to make my system even better:

1. Graphical user interface

In my program, only command line interface is supported due to the limited development time. Although I have attempted to present the information in a clearer way with the use of formatting functions and clear screen, the interface is still far from appealing and attractive. Therefore, with sufficient time and resources, the system can be presented in a graphical user interface with the use of programming languages like visual basics, Java or even HTML with CSS. With a graphical user interface, the program can be more attractive and user-friendly.

2. Extra customer functions

Currently, only two major functions, display products and manage bookmark, are included in the customer interface. The amount of functions is small compared to the staff interface. Therefore, some extra functions may be added. For example, an online goods purchasing system may be added, which allow customers to carry out online transactions through the system. Moreover, a customer rating or comment system on products may be implemented. In addition, to enhance the customers' experience in using the service of the point of sale, a customer service system can be established to collect feedback and tackle problems encountered by individuals. Finally, a discussion forum for customers to discuss and comment on the shops can be included.

3. Strengthen validation and verification

In the program, many validation and verification checks are carried out to lower the risk of bugs caused by invalid inputs. Yet, it can be further strengthened. For example, for the password of user accounts, the program can include an extra layer of security enforcing by requiring users to use a combination of alphabets, number and symbols with a length larger than or equal to 6.

4. Increase user-friendliness

Firstly, some people reflected that the instructions are not clear enough. For example, in display products module, the instructions on product searching and filtering is unclear. Therefore, more instructions can be added to indicate the purpose and usage of functions to allow a smoother user experience.

Secondly, some extra functions can be added to increase the convenience of the program. For example, due to the limitations in code complexity, in display pages, "previous page" function is not provided despite it supports multiple page display with "next page" function.
